

MILK REPLACERS FROM THE HEART OF BAVARIA

For over 40 years, we have been producing innovative milk replacers that ensure the successful breeding and fattening of your calves.

Healthy animals are the basis for the stamina of your animals and the success of your farm. Because health has a lot to do with the right nutrition, farms with experience rely on high-quality milk replacers from the Egenberger dairy.

Milk replacer feed is developed and produced in our Thierhaupten production facility according to QA guidelines and HACCP principles. Our selected raw materials are subject to the strictest inspections to ensure permanent compliance with quality requirements.

Our state-of-the-art production facilities allow us to cater to all your individual needs and wishes.
